

BOT CHAIN NATIVE

TaskForge

Communities fund what gets built.

A decentralized task and bounty platform for communities, DAOs, ecosystem projects, and builders.

The Problem

02

Community work is often fragmented, opaque, and difficult to reward fairly.

- **Scattered opportunities**

Tasks and bounties are spread across chats, forms, spreadsheets, and multiple platforms.

- **Low transparency**

Contributors often lack a clear view of funding, selection criteria, and reward status.

- **Manual coordination**

Communities spend too much time tracking submissions, approvals, and payouts.

- **Weak contribution records**

Valuable work is rarely captured as a portable, verifiable on-chain history.

The Solution

03

TaskForge turns community work into a transparent on-chain workflow.

Create

Projects publish tasks or bounties with requirements, deadlines, and rewards.

Fund

Rewards can be funded transparently and tracked on-chain.

Contribute

Builders discover opportunities and submit completed work.

Verify & Reward

Approved contributions trigger transparent reward distribution and records.

What TaskForge Offers

04

A simple workflow for both project owners and contributors.

Task & bounty creation

Set scope, deadline, requirements, and reward.

Community funding

Fund opportunities and make reward availability visible.

Contributor submissions

Submit work with links, proof, and supporting details.

Review & approval

Track submissions and select successful contributors.

On-chain rewards

Distribute rewards with transparent transaction records.

Builder history

Create a verifiable trail of completed contributions.

Who It Is For

05

TaskForge helps ecosystems coordinate work and reward contributors.

DAOs & Communities

Community tasks, moderation, research, design, growth, and contributor programs.

Web3 Projects

Feature bounties, integrations, testing, documentation, and ecosystem contributions.

Hackathons & Builder Programs

Structured challenges, submissions, verification, and rewards.

Developers & Creators

Discover opportunities, contribute skills, earn rewards, and build reputation.

Why BOT Chain

06

TaskForge is designed to make ecosystem contribution more transparent and actionable.

- **On-chain transparency**

Funding, task status, approvals, and reward transactions can be independently verified.

- **Low-friction ecosystem utility**

TaskForge gives projects a practical application for coordinating builders and contributors.

- **Composable reputation**

Completed work can become a reusable contribution record for builders across the ecosystem.

- **Growth loop**

More projects create tasks -> more builders participate -> more useful products and contributions are delivered.

Current Status & Roadmap

07

Focused on shipping a usable testnet product first.

01

MVP

Task creation, discovery, submissions, and contributor profiles.

02

Testnet

Deploy contracts to BOT Chain Testnet and validate end-to-end flows.

03

Refine

Improve UX, transaction handling, review flow, and reward distribution.

04

Adoption

Onboard communities and ecosystem projects for real task campaigns.

What We Want From BOT Chain

08

Co-marketing and ecosystem support can help TaskForge reach its first active communities.

- 1 Showcase TaskForge across BOT Chain's official social media channels.
- 2 Feature TaskForge on the BOT Chain website and ecosystem/project directory.
- 3 Connect TaskForge with DAOs, communities, projects, and builders that need contributor coordination.
- 4 Amplify TaskForge's testnet launch, active opportunities, product updates, and key milestones.
- 5 Collaborate on builder campaigns, community tasks, hackathons, and ecosystem activations.

TaskForge

Turn community needs into funded opportunities.

A transparent task and bounty layer for projects, communities, and builders on BOT Chain.

BUILD • CONTRIBUTE • EARN
